

Hardware Engineering Intern, Winter (6 months) 2027 - India

Company overview:

Google is not a conventional company, and we don't intend to become one. True, we share attributes with the world's most successful organizations – a focus on innovation and smart business practices comes to mind – but even as we continue to grow, we're committed to retaining a small-company feel. At Google, we know that every employee has something important to say, and that every employee is integral to our success. We provide individually-tailored compensation packages that can comprise competitive salary, bonus, and equity components, along with the opportunity to earn further financial bonuses and rewards. Googlers thrive in small, focused teams and high-energy environments, believe in the ability of technology to change the world, and are as passionate about their lives as they are about their work. For more information, visit www.google.com/careers.

The area: Intern - Technical

Google is and always will be an engineering company. We hire people with a broad set of technical skills who are ready for some of technology's greatest challenges and make an impact on millions, if not billions, of users. At Google, engineers not only revolutionize search, they routinely work on massive scalability and storage solutions, large-scale applications and entirely new platforms for developers around the world. From Chrome, Android to YouTube, Social to Local, Google engineers are changing the world one technological achievement after another.

Additional Role Description:

Our Winter internships will start in January 2027 and will be 22-24 weeks in duration. As a Hardware Engineering intern, you will design, develop and deploy next generation consumer hardware. Google's Consumer Hardware Silicon division (gChips) builds chips (SoCs and ASICs) optimized for Google-branded consumer devices. We aim to build a team with great talent resonating Google's culture of innovation and fun and you have an opportunity to be part of it.

As a member of a fast-paced multi-disciplinary team, you will use your creativity and diverse range of engineering experience to explore solutions to a variety of engineering problems. Additionally, as an Electrical Engineer, you will participate in the design, analysis, and prototyping of new concepts.

Responsibilities:

- Work with the team to develop power and performance optimized chips
- Contribute to the design, verification and silicon implementation of chips
- Collaborate with local and remote teams in automating design flows.
- Minimum qualifications:
 - Currently enrolled in an Associate, Bachelors, or Masters degree program and or post secondary or training experience with a focus on subjects in Electrical Engineering or a related field.
 - Relevant Internship work, work experience, or personal project experience in Hardware or Electrical Engineering.
 - Basic design concepts and computer hardware architecture

Minimum qualifications:

- Currently enrolled in a Bachelors, or Masters degree program with a focus on subjects in Electrical Engineering or a related field.
- Relevant Internship work, work experience, or personal project experience in Hardware or Electrical Engineering.
- Basic design concepts and computer hardware architecture

Preferred qualifications:

- Available to work full time for a minimum of 6 months outside of university term time
- Experience in one or more of the following areas: SoC/ASIC Design, Design Verification, Physical Design, Design for Testability.
- Experience with Verilog/HDL or System Verilog coding.
- Experience with one of the scripting languages - PERL, TCL or Python
- Experience with EDA tools and methodology like Lint, CDC, Synthesis, Formal
- Equivalence or low Power reduction techniques
